Update Center

Regular updates of your Kaspersky Internet Security software and databases ensure the most effective and complete protection.

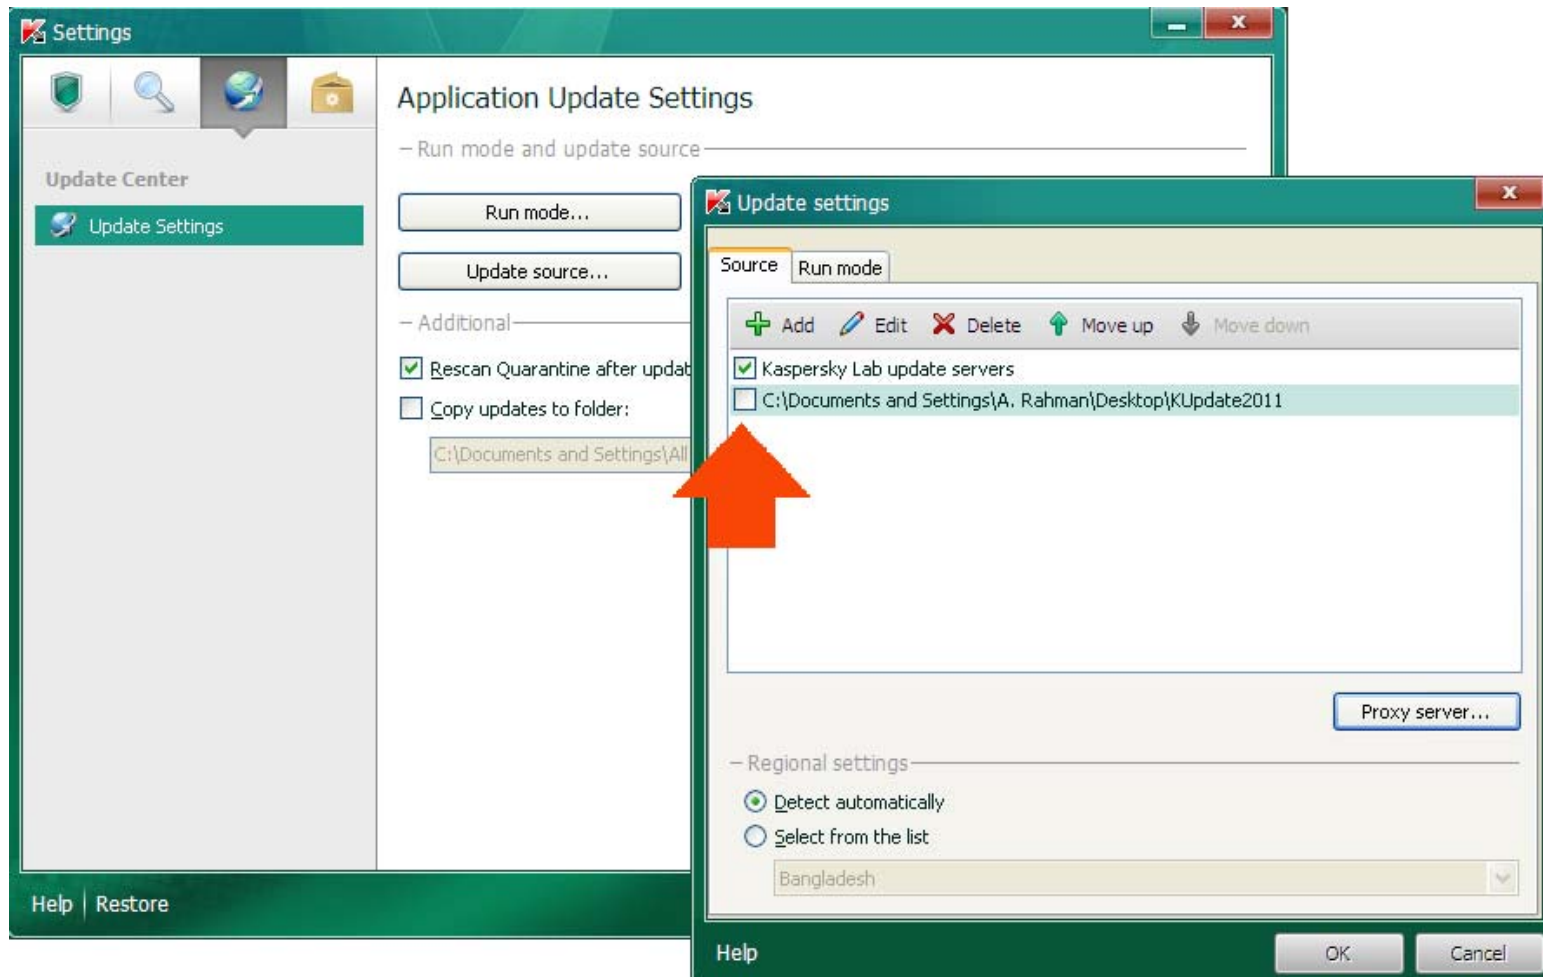

Databases status: up to date
Databases release date: 07/26/2010 12:19:00 pm
Number of signatures: 4561295

Run Update
Completed [<1 minute ago](#)
Run mode: [automatically](#)

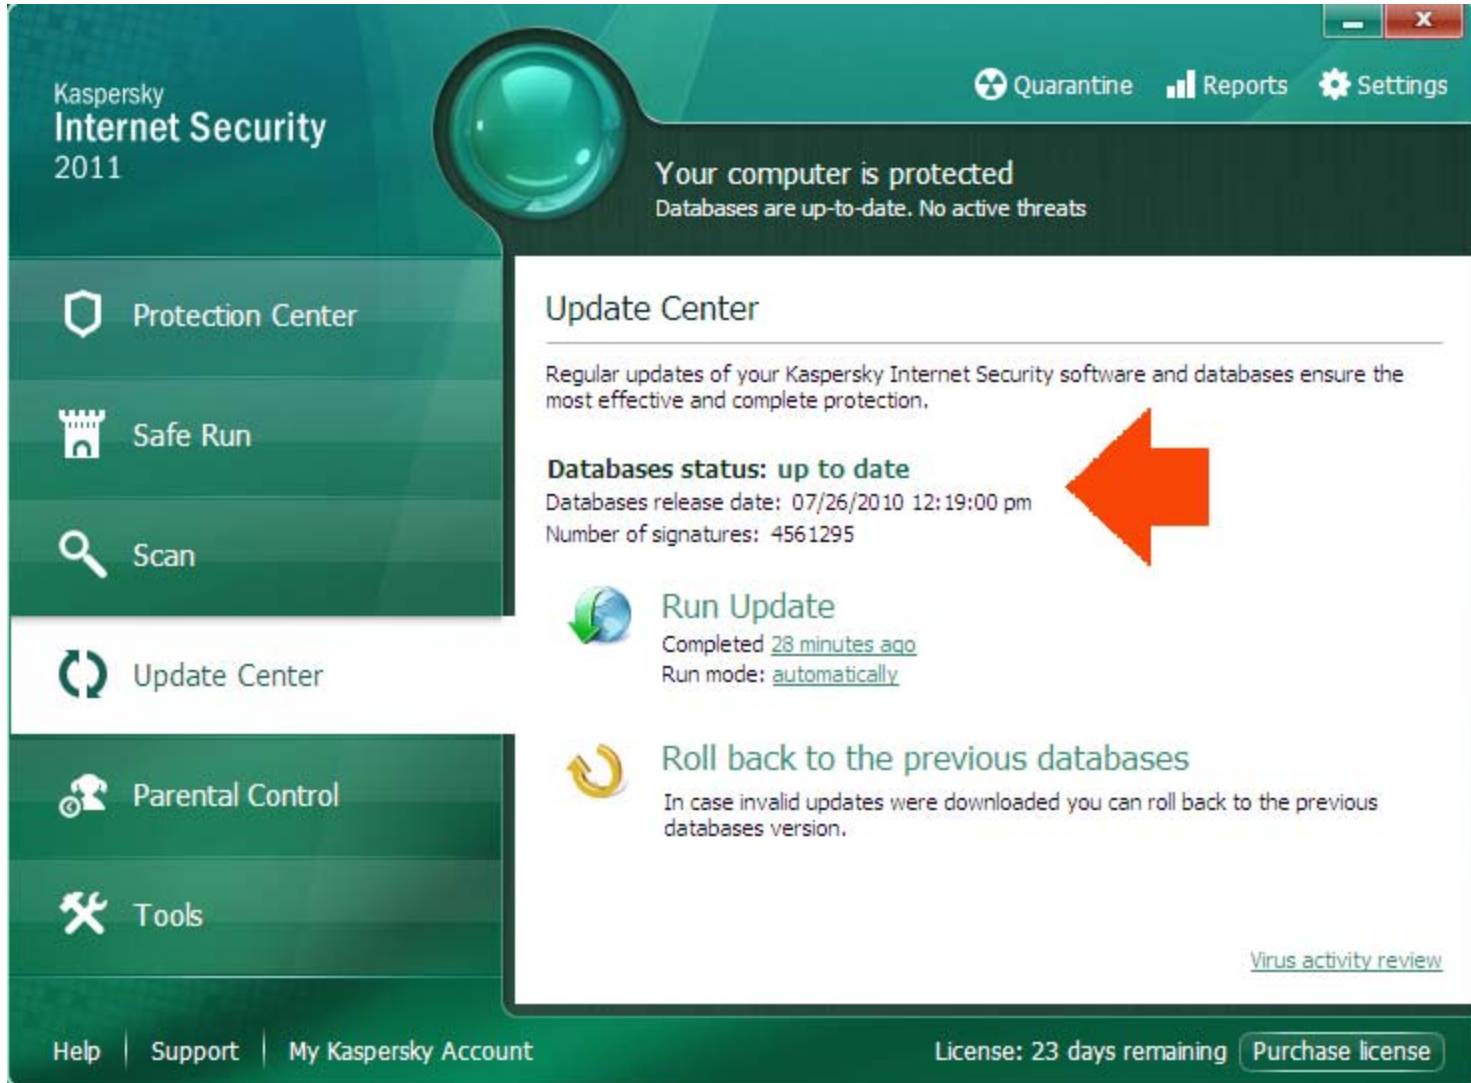

Roll back to the previous databases
In case invalid updates were downloaded you can roll back to the previous databases version.

[Virus activity review](#)

Step # 9: After manual update again you have to change the **Update Source** to the **Kaspersky Lab's update server** for further update download from internet and **uncheck the manual update source** from the list shown below, then click **OK**.

Step # 10: Finally check the Database status

The screenshot displays the Kaspersky Internet Security 2011 interface. The top status bar indicates "Your computer is protected" and "Databases are up-to-date. No active threats". The left sidebar contains navigation options: Protection Center, Safe Run, Scan, Update Center, Parental Control, and Tools. The main content area is titled "Update Center" and provides information about software updates. A prominent orange arrow points to the "Databases status: up to date" section, which includes the release date (07/26/2010 12:19:00 pm) and the number of signatures (4561295). Below this, there are options to "Run Update" (completed 28 minutes ago) and "Roll back to the previous databases". The bottom of the window shows a license status of "23 days remaining" and a "Purchase license" button.
